(54) ORGANIC ELECTROLUMINESCENT ELEMENT

(57) Abstract:

PROBLEM TO BE SOLVED: To attain an element with high luminous efficiency and excellent luminous longevity by containing an organic compound of specific composition in a luminescent layer, and containing an organic Ga complex in an electron injection layer.

SOLUTION: A luminescent layer contains a compound shown by a formula. A¹ to A⁴ in the formula, which are independent respectively, are substituted or unsubstituted alkyl group, substituted or unsubstituted monocyclic group, substituted or unsubstituted condensed polycyclic group, or a condensed polycyclic group whose nitrogen atom is a bonding hand with A¹ and A², A³ and A⁴ integrated. Q¹, Q², which are independent respectively, are hydrogen atom, cyano group, substituted or unsubstituted alkyl group, substituted or unsubstituted monocyclic group, or substituted or unsubstituted condensed polycyclic group. R¹ to R¹², which are independent respectively, are hydrogen atom, halogen atom, cyano group, nitro group, substituted or unsubstituted alkyl group, substituted or unsubstituted alkoxy group, substituted or unsubstituted

aryloxy, or the like, and R¹ and R¹² may be anew form d into a ring by bonding adjacent groups to each other.
